WORK EXPERIENCE

Citi **New York, NY**

Forward Deployed Engineer — Assistant Vice President (AVP) *Sep 2022 - Present*

- Built a Devin-assisted workforce budget-planning application for Managing Directors, translating leadership requirements and workforce data into an interactive decision-support tool.
- Engineered PostgreSQL and REST API infrastructure to monitor Devin and GitHub Copilot adoption across 4,000+ employees, enabling organization-wide developer productivity reporting for technology leadership.
- Optimized two critical reporting pipelines, reducing runtime by 90%; developed and validated Python/PostgreSQL data workflows through DEV and UAT for production release.
- Developed an enterprise GenAI knowledge-retrieval application using Python, Streamlit, Gemini, and Vertex AI, securing proof-of-concept approval for firm-wide deployment to 10,000+ employees.
- Strengthened engineering governance by raising Jira board compliance to 95% and supporting automated dependency updates across 80% of Java repositories; trained 50 employees on Devin and GitHub Copilot.

Business Analyst *Oct 2021 - Aug 2022*

- Automated executive reporting workflows using Power Query, reducing report turnaround time by 40% across eight global technology teams.
- Analyzed 20,000+ data points weekly to monitor project milestones, identify delivery risks, and support a 98% program health score.
- Delivered monthly analytical insights to 20 senior stakeholders, enabling cross-functional prioritization and data-driven decision-making.

EDUCATION

Boston University **Boston, MA**

M.S. in Computer Science & Artificial Intelligence *Graduation Date: May 2028*

B.A. in Human-Computer Interaction *Graduation Date: May 2021*

Massachusetts Institute of Technology — Professional Education **Remote, NY**

Applied Data Science Certificate: Leveraging AI for Effective Decision-Making *Graduation Date: Jul 2025*

PROJECT EXPERIENCE

AI Software-Engineering Pipeline Starter | Creator **New York, NY**

Python, GitHub Actions, Anthropic Claude, Devin *Oct 2026 - Present*

- Designed a multi-agent software engineering pipeline that orchestrates requirements gathering, repository research, specification, code generation, testing, and independent review to produce human-approved draft pull requests.
- Built GitHub-native orchestration with isolated feature branches, structured agent handoffs, bounded retry loops, and human approval gates to support auditable AI-assisted development.
- Implemented security and reliability safeguards, including restricted workflow triggers, secrets management guidance, execution limits, and explicit verification status tracking across automated stages.

SKILLS & INTERESTS

Programming: Python, Java, SQL, pandas, NumPy, Jupyter Notebooks

AI & Application Development : Claude, OpenAI, Gemini, Google Vertex AI, Cognition Devin, GitHub Copilot, RAG, Streamlit

Data & Analytics : PostgreSQL, ETL pipelines, data modeling, query optimization, Power Query, Power BI, interactive dashboards, executive reporting

Engineering & Integration : Git, GitHub Actions, REST APIs, Jira API, CI/CD, SonarQube, Renovate, Harness, DEV/UAT workflows

Interests: AI-assisted engineering, human-in-the-loop systems, measuring AI tool impact
